Maintenance – reliability you can trust

RUAG Aviation offers business jet operators – be it of a single aircraft or whole fleets – a comprehensive maintenance and service portfolio at various locations in Switzerland and Germany. As a preferred OEM partner and Authorized Service Center for Bombardier, Cessna, Dassault Falcon, Dornier, Embraer, Hawker Beechcraft, Piaggio and Pilatus, we are a recognized provider of premium MRO services and a full range of high-value complementary services and products. Focussing on our customers' needs and requirements, we constantly strive to further improve our services and extend our product range.

Engineering – experts at your service

RUAG Aviation has the system competence for complete aircraft modifications and upgrades. Our engineering teams are highly skilled and experienced in augmenting avionics (i.e. flight instruments and additional electronic equipment), aircraft systems and airframe for business and executive jets of a wide range of types. As EASA and FAA approved Design Organization with long lasting experience in the premium market segment, we bring your aircraft in line with the latest standards and regulations, using the most advanced and efficient engineering tools. Our services include repair engineering, aircraft life extension programmes, technical customer services and technical analyses.

Refurbishment and completion – high-class interior outfits

RUAG Aviation develops, manufactures, overhauls and modernizes complete aircraft interiors – be it a custom-made cabin layout or a high-end entertainment system. In close cooperation and partnership with renowned interior specialists (e.g. List components and furnitures for Bombardier and Embraer aircraft and Burnet Interiors for Dassault Falcon aircraft) we meet our customers individual ideas and requirements: From the cockpit to the baggage compartment, including interior refurbishment, design of layout and components, woodwork, leather, fabric and carpet replacements. We exclusively use high-quality paint and gloss, noble woods, smoothest leather and choice fabric. Modern production methods, our specialist's technical skills and continuous quality control allow us to achieve perfect manufacturing performance at all times.

Painting – functional aesthetics

Alongside the shape, colour gives the first impression of an aircraft. Beside the optical appearance, the most important function of painting is surface protection, requiring the use of premium quality paint. We carry out all our work in consideration of environmental protection utilizing only eco-friendly materials. Regarding this, we realize all your personal colour and design ideas – to accomplish something special, whether classic, advanced or extravagant. Our services include overall stripping and painting of business and commercial aircraft, customized design in metallic and airbrush finishes and the preparation of technical lettering and customer logos.
