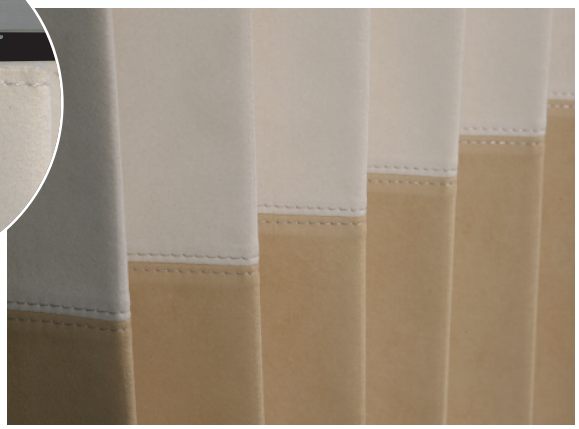
IN HOUSE PRODUCT

CURTAINS SYSTEMS

COMMERCIAL AIRCRAFT AND VIP INTERIORS

- Mechanical resistance
- High quality
- Cleaning warranty



50 years of expertise and experience :

The curtains are pleated in an autoclave without sewing on the pleat. We provide you with a warranty on 20 cleaning operations. The pleats are designed from 40 to 100 mm. The height can reach 5 000 mm.

The curtain heads can handle all type of fittings (Eyelet, Press stud...). The fittings are hidden in the curtain head and the distance to the rail is minimized for a good light tightness. We ensure the mounting of **Fastgliss** sliders as standard.

We deliver the complete curtain system including the aluminium profile, the curtains, the curtain bent loop, the sliders and the screws.

The pleating can be made with any kind of fabric :
Trevira CS® / Chlorofibre® / Ultraleather® / Alcantara® / Voile / Silk / Majilite® – according to the customer specification.

Our options :

- Engineering support to elaborate cabin integration drawings
- Sewing on the pleat on request
- **RFID** integration in the curtain head
- Vented curtains with or without magnets
- Acoustic option with nomex fabric
- Electrical actuator for pleated curtains

Our curtain systems are packed in dedicated boxes designed for international transports.

Our curtains are delivered with an **EASA form 1** or with a **certificate of conformity.**
