

Air Transport Stretcher – new heights in patient transport.

In line with current market tendencies and trends, our ATS Air Transport Stretcher has taken full consideration of the latest seat designs and a wide range of seat pitches. This is due to the innovative design concept, which enables height adjustability and quick installation times and also fits into diverse seat rail systems. End result: patient transport with complete added value.

Superior lying comfort –
thanks to a mattress coordinated
to patient requirements.

The ATS system fits inconspicuously into the cabin and takes up very little space.

Optimal lying comfort thanks to individual adjustment possibilities of the bed in the upper body and feet areas.

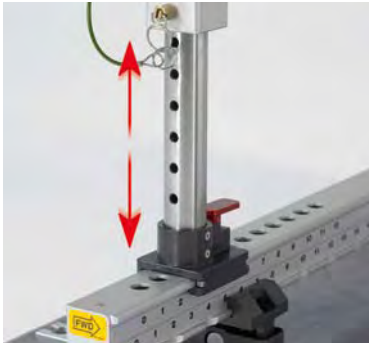

Installed in just 8-12 minutes without additional tools, the ATS fits ideally into the rows of seats.

BUCHER

For patient and operator – refined, practical versatility that simply creates added value.

When you look into the details, the real value of the ATS concept becomes clear. Here you can see the design refinements that create added value in practical operation. For example, the height adjustment capabilities and securing devices ensure rapid assembly and disassembly. Thanks to a range of accessories, practically any operational situation can be managed.

Height adjustment

Safe and generous height adjustment range with sturdy hole locking device.

Locking device

Easy handling – the practical and reliable method for rapid assembly/disassembly.
